

Clinic + Mobile Denture Service

Cleaning Your Dentures

- ◆ We recommend cleaning your dentures at least once a day using a brush and liquid dish washing detergent.
- ◆ Soak your dentures every few days in a denture cleaner such as Steradent or Polident.
- ◆ **Splash, not smash** — remember to fill the sink with water so that if you drop your dentures there is less chance of them breaking.
- ◆ We recommend professionally cleaning your dentures every 12 months to maintain the high shine and prolong the life of your denture.
- ◆ Professional cleaning can be done in the clinic while you wait or our Mobile Service can come to your home and return your clean dentures in the afternoon.
- ◆ Professional denture cleaning is affordable and you can claim with your health fund.
